

Software Developer Internship

Location: London, UK

Salary: £38,000 pro rata

Closing date for applications: 31 December 2022

Length: Up to 10 weeks between June and September 2023

Description:

FINBOURNE is offering Software Developer Internships for Summer 2023. This is an exciting opportunity for undergraduates or graduates to see first-hand how we build capability in our LUSID platform. Our internship is aimed at giving you exposure across our entire business. Although this is constantly evolving, the typical tasks you will be involved with range from helping to develop our APIs and building high performance and scalable distributed systems to helping us ensure everything we do is robust and reliable.

Technologically you will gain exposure to C# (.NET Core), PostgreSQL, AWS, Kubernetes, Docker, C++ and Python. We will also provide training sessions to give you an overview of the Financial Services industry, Asset Management, Investments and further insight into our business and product.

We are recruiting across all of our Engineering teams. During the recruitment process we will determine where your current skillset lies as well as your interests before assigning you to a team.

How we will support you:

- You will be working with highly experienced developers who will provide training and mentoring for you. These individuals have spent their careers at some of the most prestigious financial technology institutions and are eager to share their experience.
- In addition to your Line Manager, you will be assigned a mentor within your team to provide you with support and guidance throughout your internship.
- You will be invited to regular knowledge sharing sessions and discussions on best practice in coding and finance.
- Access to a network of colleagues who are happy to answer your questions and explain answers in detail.

What we are looking for:

- Candidates in their penultimate or final year of study
- Studying a STEM subject.
- Candidates who are genuinely passionate and curious to continue learning, and those who are driven to solve tough technological problems and apply critical thinking to their work. Additionally, we are looking for candidates who display strong communication skills and who feel comfortable working in an informal, agile environment.
- Ideally a genuine interest in Finance.
- Ideally you will also have some experience programming.

Throughout the internship you will be assessed with the view to being made a permanent job offer.

Applications:

- To apply please submit a copy of your CV to lucy.ayres@finbourne.com
- Applicants will receive a coding challenge to complete and if successful will then be interviewed by a cross-section of the team
- Whilst FINBOURNE will not be offering accommodation as part of this internship, we are very happy to provide advice on where to find temporary accommodation in London.

More about FINBOURNE

We are a young, dynamic financial technology company aiming to re-engineer the world of investing to make it clearer, faster and more cost effective for everyone.

We are looking for our future architects, engineers and ultimately leaders to join us on this journey.

At FINBOURNE, we offer a hugely supportive environment to build a career, with continuous learning and development opportunities. We have a collaborative culture of testing and exploring problems together to find the best evidence-based solutions. We respect your independent thought, your intellectual curiosity and your opinion.

Our solution is open, API first and developer friendly – a true first for the asset management industry. You can see what our team is busy building – we've published our Software Development Kits in five languages on [Github](#): (C#, Java, Javascript, Python, Angular).

For more information about our culture, career development and the benefits we offer our employees, please visit our [website](#).
